

STROBE-BRIK™

Installation Grommets

for use on SB-002QD xenon and SB-010QD LED strobes

Use these handy grommets to provide a quick and easy installation method for your xenon strobes. These grommets insulate and seal, while damping vibration and minimizing abrasion.

The 9/16" thick grommets have an inside diameter of 3/4" and fit snugly over the strobe's housing. The desired mounting hole opening or tube is sized to fit the grommet's 1 3/8" outside diameter.

The pictures at the right show how a SB-002QD strobe might be secured in a mounting tube. The tube is affixed to the interior of the desired surface. The bottom picture shows the exterior view of the finished installation.

Grommets are made of Buna-N rubber, have a temperature range of 0° to 250° F, and are black in color. Durometer hardness is 50A.
